

# Impulse user guide

V1.2.1 – 01/2021

Kim Jong-un

Welcome to the Impulse guide on how to use the impulse mod menu, here you will find information from the downloading of the menu, to common faqs and support questions asked!

This guide is split into sections for your easier viewing and getting to what you need, please see below the table of contents to navigate to the section you desire.

|                            |                                            |
|----------------------------|--------------------------------------------|
| <a href="#">Page 3</a>     | Required software and Injection methods    |
| <a href="#">Page 4</a>     | How to install and inject                  |
| <a href="#">Page 5</a>     | Custom headers and chat commands           |
| <a href="#">Page 6</a>     | Windows security and Virtual machine usage |
| <a href="#">Page 7</a>     | Payment information                        |
| <a href="#">Page 8</a>     | Payment information continued and forms    |
| <a href="#">Page 9</a>     | Menu tags                                  |
| <a href="#">Page 10-12</a> | Common support questions                   |
| <a href="#">Page 13</a>    | FAQs                                       |

## Required software

The first thing you need for any injection method is WinRAR, this software is a file archiver utility used to combine multiple files into one download, you can either click the link or google WinRAR download.

<https://www.win-rar.com/download.html?&L=0>

On this website you will see a wide range of download links, you need to get the latest version and the one that matches your system, you have either a 64 bit or 32 bit system, to find out which one you have follow these steps.

- 1 – Right click your windows start button at the bottom left of your taskbar.
- 2 – Click “System” located 4<sup>th</sup> from the top.
- 3 – Under “Device specifications” look for the “System type” line, located 6<sup>th</sup> from the top, here it will say you have either a 64-bit system, or 32-bit

Now you can go back on the WinRAR website and download the version that applies to your system or click the links below for the most recent at the time of this guide.

32-bit – <https://www.win-rar.com/predownload.html?spV=true&subD=true&f=wrar600.exe>

64-bit – <https://www.win-rar.com/predownload.html?spV=true&subD=true&f=winrar-x64-600.exe>

## Injection methods

You need to choose which version of the injection method you want, see below the differences.

**Manual** – Manual injection means you need to download the .dll file on the impulse website every time an update is released, to inject you need to use an additional program called xenos (Included in the download) to inject the menu.

**Launcher/Automatic** – Using the launcher is far easier than the manual injection method, allowing for access away from the site. This will provide you with a clean portable view at account information, access to add-on theme and vehicle downloads, trainer downloads, a built-in injector, as well as purchasing and live product support.

## How to install and inject

### Manual

- 1 – Head over to <https://impulse.one/> login, and navigate to the download page which can be found by clicking the tab named "Downloads" <https://impulse.one/download.php>
- 2 – On the right hand side of the page, under the panel called "Downloads" click "Download **Your edition** Impulse files" and save to your pc.
- 3 – Extract your downloaded files from the .RAR into a folder in your documents folder called "Impulse"
- 4 – Start the xenos.exe.
- 5 – in xenos press the "Add" button then you need to navigate to your Impulse folder you just created, and delete the .dll
- 6 – Click "Advanced" ensure the inject type is set to "Native inject" click "ok"
- 7 – Start GTA V, once in the main menu where you choose to go online or story you can inject.
- 8 – In xenos, make sure your process selection is "Existing" In the process drop-down click "GTA5.exe" after this you can click "Inject"
- 9 – After clicking inject you will get an error, this is normal and you can close it off as it means the menu is injected, you can now use impulse!

### launcher/Automatic

- 1 – Head over to <https://impulse.one/> login, and navigate to the download page which can be found by clicking the tab named "Downloads" <https://impulse.one/download.php>
- 2 – On the right hand side of the page, under the panel called "Downloads" click the version of the menu called "Impulse Launcher"
- 4 – Run the .exe and you'll be guided throughout, don't install the launcher into your GTA V directory.

## Custom headers, VIP only

Instructions on how to insert headers – <https://www.youtube.com/watch?v=uwEFbt8Llyw>

Instructions on how to create custom headers – <https://www.youtube.com/watch?v=SXOI6Fk3n-c>

Instructions on how to create custom animated headers - <https://www.youtube.com/watch?v=38onB195ZwM>

### Animated headers

1. split your gif into frames(max. 120) and download as png/jpg files (for example with <https://ezgif.com/split> )
2. rename every frame into CustomFrame0 , CustomFrame1 , CustomFrame2 and so on... (either do it manually or use a program like [https://www.bulkrenameutility.co.uk/Downloads/BRU\\_setup.exe](https://www.bulkrenameutility.co.uk/Downloads/BRU_setup.exe)
3. add all frames to an empty customheader.ytd with OpenIV (a config file is not needed, only for static headers) and place the file in Documents/Impulse/YTD (get OpenIV at <https://openiv.com/WebIV/guest.php?get=1>)
4. set the amount of frames your header has in the animated header settings, also change the delay for speeding up or slowing down the frame delay
5. activate the animated Header (if you want to change delay or frames, deactivate the header, do the settings and activate it again)

You can only add 1 animated header per file(customheader.ytd)

## Chat commands, VIP only

Chat commands is a VIP only feature that allows people within your lobby to type in chat commands that will trigger your menu, some of these commands only work when the player is near you, commands available are listed below.

```
!kick <playername>
!money <on/off>
!spawn vehicle <hash/model name>
!spawn ped <hash/model name>
!spawn object <hash/model name>
!spawn bodyguard <count>
!weapons
!explodesession
!vehicle repair
!vehicle boost
!vehicle jump
!vehicle upgrade
!copsturnblind <on/off>
!offtheradar <on/off>
!weather <day/night/clear/snow/halloween>
```

## Security

If your injection is having issues, it's probably because of your Anti-virus/Anti-Malware software blocking the injections, you need to disable your software or add exclusions to impulse.

### How to add an exclusion to windows defender.

1. Go to Start > Settings > Update & Security > Windows Security > Virus & threat protection.
2. Under Virus & threat protection settings, select Manage settings, and then under Exclusions, select Add or remove exclusions.
3. Select Add an exclusion, and then select from files, folders, file types, or process. The exclusion will apply to sub-folders within a folder as well.

Or in your browser just copy and paste this link into your address bar – <ms-settings:windowsdefender>

## Virtual machine

Impulse is not compatible for usage on any cloud PC system or virtual machine. In addition, it is not compatible for use with external servers, such as FiveM.

However for some people, their install thinks the computer is running a VM, and gives an error. You can try to fix this error, and its worked for others, by doing the following. - If the name of your computer starts with "DESKTOP" within it, for example DESKTOP-123ABC, to fix it go to System --> Advanced Settings --> Computer Name. Click "Change" and change the "DESKTOP" to something different, like John-PC, etc... and then restart your computer afterwards.

You can also try disabling Hyper-V in the BIOS or by going to "Programs and Features" and search within " Turn on and off Windows Features".

<http://impulse.is-pretty.cool/BAiayeK.bat>

## Payments

Impulse accepts the following payment options; Bitcoin, Crypto voucher & Bitnovo voucher.

Please make sure voucher purchased is in (euro) value.

### HOW TO GET A CRYPTO VOUCHER:

<https://cryptovoucher.io/>

<https://www.hrkgame.com/en/games/products/?search=crypto+voucher>

<https://www.recharge.fr/crypto-voucher>

<https://www.guthaben.de/>

<https://www.mmoga.com/Bitcoin-Gift-Cards/>

### OTHER PAYMENT METHODS:

<https://dundle.com/cryptovoucher/?c=eur>

<https://igiftcards.fr/cryptovoucher/>

In addition to Crypto voucher itself, support can exclusively accept Bitnovo vouchers for added flexibility.

### HOW TO BUY BITNOVO:

<https://dundle.com/bitnovo/?c=eur>

<https://igiftcards.fr/bitnovo/>

<https://www.recharge.fr/bitnovo>

You can also use Changelly to buy Bitcoin direct with your debit card. However there is a 50\$ minimum.

### How do I purchase a Bitcoin voucher?

To purchase a Bitcoin voucher online, visit the Crypto Voucher website

<https://cryptovoucher.io/#onLine> then click "Buy Online" button, select €10, €25 or €50 as the voucher value, then select vendor from their list of available online distributors. These various distributors offer many traditional methods of payment such as debit and credit cards.

Once you have received the voucher, visit <https://impulse.one/purchase.php> and submit the voucher code you purchased by selecting one of the packages, €10 Essential package, €25 Standard package or the €50 VIP package (see image to the right).

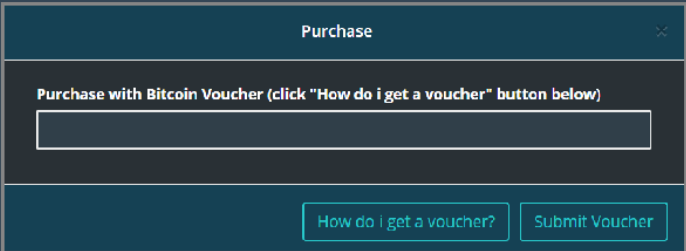

**To submit a Bitcoin voucher, visit Impulse purchase page**

**Click the "Purchase" button of the package you want**

**Paste the Bitcoin voucher code that you purchased into the box, and then click "Submit Voucher". If submitted successfully, a pop-up notification will appear.**

**VERY IMPORTANT: DO NOT REDEEM OR CASH OUT YOUR OWN VOUCHER, PRIOR TO SUBMITTING, OR IT WILL BE DENIED AS INVALID**

(A proper Bitcoin voucher code will be 32-digits and alphanumeric, containing no spaces or hyphens) Usually within 5 hours, the voucher submission will be verified and processed. Once completed, you'll receive access to Impulse and be assigned your PAID membership status. If 24 hours have elapsed and you are still not verified, please visit the Impulse support centre.

#### **Other methods we also accept:**

Bitcoin via Sellix:

**€10 Essential** – <https://sellix.io/product/6018ce261647e>

**€15 Upgrade [Essential to Standard]** - <https://sellix.io/product/6018cf19046b0>

**€25 Standard** – <https://sellix.io/product/6018ce8aa3c5d>

**€25 Upgrade [Standard to VIP]** - <https://sellix.io/product/6018cf4f05ef1>

**€50 VIP** – <https://sellix.io/product/6018cec30a250>

**Attention: US Customers who decide to purchase a Cryptovoucher on Cryptovoucher.io, be aware that any Voucher purchased there, will be in USD. Since our prices are in EURO, you have to buy the correct value! (For example: Buying a 10usd voucher for Essential will lead to a failed purchase, as 10EURO is around 12USD. Make sure to check the conversion in google before you purchase!)**

**Understand that we have no affiliation with these sites, we are just recommending/providing on their services**

If you have tried to activate your Impulse Membership using a Crypto voucher and have not yet received your corresponding tier, please consider the following:

- Crypto vouchers submitted to Impulse take 3-24 to be checked. If it has not been longer than 24 hours, please be patient.
- Make sure your bought/submitted voucher has the Currency of € (EUR). Crypto vouchers with a value of \$ (USD) will need to be adjusted to match the value of Euro
- If you have redeemed your voucher before submitting, you have submitted a redeemed voucher worth nothing.
- Make sure you have redeemed in the correct place when purchasing Impulse. Do not redeem your voucher in the "Key Redemption" area.

## **Forms**

Bug form: <https://forms.gle/jnFTm2mXLR6WoTrx5>

Feature suggestion: <https://forms.gle/SE6XCow5rVD4nMQY8>

Ban reports: <https://forms.gle/44DyjFhW2VcvDbVG6>

## **YouTube impulse help channel**

[https://www.youtube.com/channel/UCB7\\_C3eqmI8BUh8VfZSGRvw](https://www.youtube.com/channel/UCB7_C3eqmI8BUh8VfZSGRvw)

## Menu tags

**[CUTSCENE]:** " Player now in the process of cutscene",

**[F]:** "Your Social club contact/friend",

**[GOD]:** "Player cannot be killed. This will show when the player is in apartments/facilities/night clubs or any safe houses so the phrase is not quite precise."

**[IMP-B]:** "Protecting you from other IMP modders (they can only use ESP)."

**[IMP-STAFF]:** "It will show your identity as a staff." (Staff version),

**[IMP-VIP]:** "It will show your identity as a VIP.",

**[IMP]:** "Only for staff versions (even if you don't show your identity as a VIP) (Staff version)",

**[INT]:** "It shows while players are in safe houses like apartments/facilities/night clubs. It can always be misunderstood as god mode.",

**[JOINING]:** "You are now joining the session/above the clouds",

**[OTR]:** "Radar conceal.",

**[PASSIVE]:** "Passive mode.",

**[MOD]:** "The user has modded money and stats",

**[PAUSED]:** "Player now on hold.",

**[ROCKSTAR]:** "Rockstar staff (Several rids used by Rockstar staffs had already been added to menus like warden and impulse. All people have to do is to use their rids so they will be seen as Rockstar staff in the menus. To determine whether or not these players are Rockstar staffs, we just have to check their ip. The Rockstar staff's ip is 139.138.224)". impulse improved the "RockStar" detection method, using ip / rid spoof can no longer make impulse mark "RockStar"

**[SCTV]:** "Developer mode",

**[SELF]:** "self",

**[Script Host]:** "The host of scripted events like or free mode stuff, can cause you to be stuck in the cloud.",

**[Session Host]:** "The host of the game session. You can use host kick against this one and this kick can not be prevented by any menu.",

## Common support

### Crashing on startup

If you're crashing as soon as you're injecting, please delete your Impulse folder C:\Users\Username\Documents\Impulse and disable all protections then try again. You can keep your config.ini file, if it still doesn't work, delete your config too. if this doesn't fix it, contact official Impulse support on website or launcher (<http://impulse.one/>)

### How to gift vehicles and what vehicles can be sold

Gifting Vehicles is an Impulse Standard\VIP Only Feature! All Garages like the Arena Workshop or Maze Bank with multiple Garage levels don't work! More information can be found via this you tube video.

<https://www.youtube.com/watch?v=gvy-ZtGOO1o>

### Black screen after injecting

- Make sure you're running in Windowed or Windowed Borderless mode
- Make sure you have "Pause game on focus loss" turned off - Make sure to disable all active overlays you may have on

### General instability and crashes

- Verify you are using latest available driver for your graphics card.
- Install everything from here: <https://support.microsoft.com/en-us/help/2977003/the-latest-supported-visual-c-downloads> (all needed Microsoft Visual C++ Redistributable Packages)
- Try to remove every file not belonging, officially, in your GTA Folder such as old menus/mods. (verify game files afterwards)
- Try deleting or renaming your Impulse Folder in Documents (so you get a new folder if you relaunch the game/mod)
- Disable every Overlay you might have (For example: Nvidia, Discord, Steam, Teamspeak, Fraps, OBS..etc) - Close every program that is not needed to run GTA.

If you're crashing after authorization finishes and you don't have anything in your gta directory that isn't their by default (other mods/menus) then its because you have a special character in your Windows user name. Here is how to change it: <https://www.youtube.com/watch?v=sBL5MbmmOnk>

- If you have a lot of players in your overseer (like the r\* admins list) your game will most likely crash while you scroll through overseer menu.

Having 50-70 players should be enough for it to not crash.

### Menu keeps scrolling

if your menu is scrolling up on its own:

- wait a couple minutes
- restart the game
- use the mouse cursor (press x) to use the menu and it should stop it
- changing session seems to work too

### **Audio stops working after injecting Impulse**

1. Press the Windows+R key
2. Type services.msc
3. Locate "Windows Audio" service
4. Right click on the service and click restart

### **Launcher crashes/instability**

Delete impulse folder Documents/Impulse then re-install the launcher.

If this doesn't fix your issues

Add exclusions to your anti-virus, of Documents/Impulse folder & Documents\Impulse\Launcher\bin\ Launcher.exe program.

If this doesn't fix your issues, please contact official support on the website impulse.one Issues with the installation being deleted, please refer to security on page 6.

### **Peds don't die/cant be deleted – Vehicles cant be used/stuck in animation**

Turn off all your Protections in Single player, join Online and try again.

### **How to install SHV mods from the launcher - VIP only**

1. open the rar file inside Documents\impulse\plugins.
2. put the .asi file inside the plugins folder.
3. put any other files inside the rar in your game directory. in game go to the ScripthookV tab and load the mod

### **Your Virus & Threat protection is managed by your organization**

This can happen if malware/third party antivirus software is/were installed on your system.

If you are having trouble disabling antivirus protections on Windows Defender because you can't access it this should allow you to access those settings.

Here is a Registry editor that will automatically delete the registry disabling your access to Windows defender settings.

Make sure to restart after deleting the registry.

Create a text file, inside the text file copy and paste the following.

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender]
"DisableAntiSpyware"=dword:00000001
```

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Windows Defender\Policy Manager]
```

Save this file as a .reg then run it.

### **Map mods crashing**

Map mods in impulse are of a custom format, this means you cannot use files from other menus such as menyoo using these will cause you to crash, instability of maps can occur when mass amounts of objects are being spawned or the map was made a while ago before many updates, maps are generally a trial and error process and cannot all be guaranteed to work.

### **Controller input**

Open menu with RB+left D-Pad

### Change/hide other people's names locally

Enable streamer mode in the menu

### This app can't run on your pc

This can appear for a couple of reasons, the most common reason is your browser stopped the download of the installer, try re-downloading the launcher, the size shouldn't be 0kb.

If this didn't fix your issues, try below.

1. Go to Start > type **cmd** > right-click Command Prompt > select Run as Administrator
2. Now type the **sfc /scannow** command
3. Wait for the scanning process to complete and then restart your computer. All corrupted files will be replaced on reboot.

### Getting crashed by other modders

Impulse protections are updated every patch release, this commonly comes with protections against other menus crash methods, unfortunately it is impossible to do a one fix all method against all crash methods as other menu developers find new ways of avoiding detection.

You can try making your own custom protections via the menu, this is for advanced users only however and is better done by logging the crash attempts in a solo lobby with a friend using the other menu, then logging these hashes into your custom protections.

### **ALERT** There has been an error joining a session, Please return to Grand Theft Auto V.

The most common causes for this GTA error are either your VPN connection is being blocked by R\* or you're spoofing with information that has been blacklisted by R\*, this can be something like spoofing your name as "Admin", change or disable your spoofs and try again.

## FAQ

### **Q – Which versions of Windows are supported by Impulse?**

A – We are officially compatible for use with Windows 7 and Windows 10. We offer support services for both these versions of Windows and also regularly test our products on both variants. For users on other versions, such as Windows 8 or 8.1, we do not test nor offer support. In addition, we can't guarantee functionality with any other operating system beyond Windows 7 & 10.

### **Q – How often does Impulse get updated?**

A – We update regularly, often each week. It might not always be a shiny new feature, sometimes it's simply a behind the scenes update to improve overall product performance. Whenever a new version is released, we will make a site announcement to inform you. In addition, you can always verify the current version number by checking along the top of the home page.

### **Q – Does this work on the newest title update?**

A – Yes, our current release is stable and compatible for usage with the latest GTA V title update, when an update for GTA is released, the menu will be taken offline for updates on the menu to be made compatible with the latest release, there is no ETA on updates.

### **Q – Can I use this trainer on a cloud based PC system or virtual machine?**

A – Impulse is not compatible for usage on any cloud PC system or virtual machine. In addition, it is not compatible for use with external servers, such as Five M.

### **Q – Can I co-load and use other trainers alongside Impulse?**

A – While we do technically allow this, we offer no guarantees that other trainers or mods will be compatible and function as expected, or at all. In addition, we do not provide support for other products.

### **Q – Can I share or sell my Impulse account?**

A – All accounts and purchases made on Impulse are expected to be maintained and used solely by the account holder. Under no circumstances are you permitted to share or sell your Impulse account. If you are found to be sharing an account, or found to be selling your account, you will be banned without notice. In addition, anyone considering a purchase should do so only through our official website, or via the Impulse support centre.

### **Q - I would like to change my username, password, or update my email for my account & trainer login, how can I do that?**

A - Contact the Impulse support centre and we will be happy to help you. We can update your information after you have provided evidence of ownership (Redeemed key, registered email, and additional info for verification may be required)

### **Q - How do I contact the Impulse Support Center?**

A - The Impulse support center is available 7 days a week, although operating hours can vary from day to day. If support is online, and agents are available, you will see the support widget in the lower right corner of your screen. If the widget is not visible, this means support is offline and you'll need to wait and check back later. (Please Note: We do NOT have an offline ticketing or offline message system) You can also talk to support via the impulse launcher.

If none of this guide helped you, feel free to join the community ran discord server where you can open a support ticket, <https://impulse.community/>

Or talk to official support on the impulse.one website.
